MAVEX
The world's first enzyme
based callus remover
that is safe for all skin types

Introducing the Mavex System
The Mavex System is a revolutionary new way of removing calluses and corns. It is a safe, effective, and painless treatment that can be performed by anyone. The Mavex System is made up of three parts: the Mavex Enzyme, the Mavex Peel, and the Mavex Cream. The Mavex Enzyme is a powerful enzyme that dissolves the dead skin cells that cause calluses and corns. The Mavex Peel is a thin, flexible sheet that is applied to the affected area. The Mavex Cream is a soothing cream that is applied after the peel is removed. The Mavex System is a complete solution for calluses and corns. It is safe, effective, and painless. It can be performed by anyone. The Mavex System is a complete solution for calluses and corns. It is safe, effective, and painless. It can be performed by anyone.

"Mavex Calluspeeling is the perfect treatment as it transcends genders," explains a spokesperson from Mavex. "While you have the client seated in the chair, you can ask questions and educate them on foot care and skincare which could also lead to retail sales. "Calluspeeling works by dissolving the enzyme that causes dead skin cells to stick together, softening the hard skin and allowing it to be easily removed with a simple plastic tool. The treatment is finished with a massage using the Daily Care Foot Cream specially formulated with a high urea content so it is easily absorbed."
